

AUTHOR INDEX**Volume 39 (1982)**

- Abbott, H.L. and A. Liu, Remarks on a paper of Hirschfeld concerning Ramsey numbers (Note) (3) 327-328
- Andreac, T., Reconstructing the degree sequence and the number of components of an infinite graph (1) 1-7
- Beineke, L.W. and C.M. Zamfirescu, Connection digraphs and second-order line digraphs (3) 237-254
- Billington, E.J., More balanced ternary designs with block size three (1) 9-21
- Borzacchini, L. and C. Pulito, Some results on conversion matrices (3) 255-261
- Brouwer, A.E. and G.H.J. van Rees, More mutually orthogonal Latin squares (3) 263-281
- Cai, Mao-cheng, A new bound on the length of the shortest string containing all r -permutations (Note) (3) 329-330
- Chaffer, R.A., A construction of orthogonal arrays and applications to embedding theorems (1) 23-29
- Diener, I., On S -cyclic Steiner systems (3) 283-292
- Farrell, E.J., A note on the circuit polynomials and characteristic polynomials of wheels and ladders (1) 31-36
- Frank, A., A note on k -strongly connected orientations of an undirected graph (Note) (1) 103-104
- Gansner, E.R., On the lattice of order ideals of an up-down poset (2) 113-122
- Hammond, P., On the non-existence of perfect and nearly perfect codes (Note) (1) 105-109
- Hansel, G., Baionnettes et cardinaux (Note) (3) 331-335
- Harary, F., R.A. Melter, U.N. Peled and I. Tomescu, Boolean distance for graphs (2) 123-127
- Hartman, A., Quadruple systems containing AG (3, 2) (3) 293-299
- Howard, F.T., A theorem relating potential and Bell polynomials (2) 129-143
- Hwang, F.K., Complete balanced Howell rotations for $8k+5$ teams (2) 145-151
- Jamrozik, J., R. Kalinowski and Z. Skupień, A catalogue of small maximal nonhamiltonian graphs (Note) (2) 229-234
- Kalinowski, R., see J. Jamrozik (2) 229-234
- Kelly, G., On the uniqueness of embedding a residual design (2) 153-160
- Ko, H.-P. and D.K. Ray-Chaudhuri, Intersection theorems for group divisible difference sets (1) 37-58
- Laborde, J.-M. and S.P. Rao Hebbare, Another characterization of hypercubes (2) 161-166
- Lehel, J. and Zs. Tuza, Triangle-free partial graphs and edge covering theorems (1) 59-65
- Liu, A., see H.L. Abbott (3) 327-328
- Melter, R.A., see F. Harary (2) 123-127
- Merris, R., Majorization of characters of the symmetric group (2) 167-169
- Monroe, T.R., see W.T. Trotter, Jr. (1) 87-101
- Nasu, M., Uniformly finite-to-one and onto extensions of homomorphisms between strongly connected graphs (2) 171-197
- Owens, P.J., Shortness parameters of families of regular planar graphs with two or three types of face (2) 199-209
- Peled, U.N., see F. Harary (2) 123-127
- Pudlák, P. and V. Rödl, Partition theorems for systems of finite subsets of integers (1) 67-73
- Pulito, C., see L. Borzacchini (3) 255-261
- Rao Hebbare, S.P., see J.-M. Laborde (2) 161-166
- Ray-Chaudhuri, D.K., see H.-P. Ko (1) 37-58
- van Rees, G.H.J., see A.E. Brouwer (3) 263-281

- Rödl, V., see P. Pudlák (1) 67–73
- Skillicorn, D.B., More generalized packing numbers (1) 75–86
- Skupiński, Z., see J. Jamrozik (2) 229–234
- Tuza, Zs., see J. Lehel (1) 59–65
- Tchuente, M., Parallel realization of permutations over trees (2) 211–214
- Tomescu, T., see F. Harary (2) 123–127
- Trotter, W.T., Jr. and T.R. Monroe, A combinatorial problem involving graphs and matrices (1) 87–101
- Wei, W.-D., The class $\mathcal{A}(R, S)$ of $(0, 1)$ -matrices (3) 301–305
- West, D.B., A class of solutions to the gossip problem, part I (3) 307–326
- Winkler, P., Average height in a partially ordered set (Communication) (3) 337–341
- Zamfirescu, C.M., see L.W. Beineke (3) 237–254
